I am making my first tnc. Please tell me which communication program
for packet radio is suitable for beginners.

You need to check the interface not the radio. look at the pactel or
any issue of qst mag there are usually several bench mark comparision
in each issue as well as ads from various companies. The fax is not
like standard telephone fax for business or character recognition.
But fasimile for wxmaps ref to arrl publications if you need some
titles ill hunt them up for you as well as issues.
My call is WB4YQS.

Hi All,

Is there a Pactor newsgroup?

Yes, but "boyfriend" means different things to different people. There's
no law against dating more than one person, after all. :-)

Besides, could always invite her to see your shack and check out your
equipment. :-)

Subject: Timewave DSP-9 or 59?
To: ham-digital@ucsd.edu

I am also interested in the Timewave DSP-9. I am especially interested
in how much real audio gets through the thing.....does it take the
audio and chop it up much when it gets to the speaker? I really like
my fidelity (such as it is from my 2.1 kHz filters), and would hate
to make it worse, though the auto notching is a very nice feature.

Would love to hear from owners!

Scott,

The best TNC on the market today for ease-of-use is the KPC-3. If you buy this it will cost you around \$125 out the door. You might seriously consider the 128K RAM upgrade as well, especially if you plan to use the mailbox all the time.

Let me know what you get and how you like it.

I HAVE my Extra, son ... and I'm a VE on top of that ...

>
>Or start doing EME and impress her with yer antenna array...

I have a SIG file that used to say, "I'm cute, I'm cuddly, and
I have lots of nice, BIG antennas" <<Grin>>

It attracted attention alright <<Grin>>

Yeah ... talk about your actually kick in the head ... the packet
station that 21 year old YL was using down at her college
was actually her boyfriend's ... yike ... talk about your
Kobayashi Maru, boys and girls ...

What is needed to broadcast data at high speed over FM? How fast can you go
and can you use "normal" modems, or i.e. a Telebit Trailblazer.

What does the receiver need?

I know nothing about this world but I'm really interested in the possibility
of sending data over wireless connections to different places simultaneous.

If you can't use normal modems, what are these radio modems and how fast do
they go? Any brands?

Many thanks in advance for your answers.
